Hydrocarbon Discovery - Exploration Well Fazl X-1, Hala Block, Sindh

Hala Block (2568-13) joint venture consists of Pakistan Petroleum Limited (PPL) having 65% working interest and operatorship of the Block and Mari Petroleum Company Limited (MPCL) having 35% working interest. With an area of about 276.17 square kilometers, the Block straddles Sanghar and Matiari districts in Sindh.

Exploration well Fazl X-1 located in district Matiari, Sindh, was spud-in on May 29, 2015 and final depth of 4,067 meters was reached on August 12, 2015. As informed by PPL (the operator) based on wire line logs and drilling results, potential hydrocarbon bearing zones were identified within Lower Goru Massive Sand. Initial testing in the Massive Sand interval flowed 20.26 MMSCFD of gas along with 50.4 bbls/day condensate at 48/64" choke size, thus confirming the presence of commercial quantities of natural gas and condensate at Fazl X-1.

The well is being flowed at different choke sizes to measure the gas flow rates, and the actual flow potential of the well will be determined after completion of the test. Fazl X-1 is the third discovery in the Block after Adam X-1 and Adam West X-1, which were both successful.

The discovery at Fazl X-1 will add more hydrocarbon reserves and reduce the gap between supply and demand of oil and gas in the Country.
