Re: **Material Information**

Dear Sir,

In accordance with the Listing Regulations, we are pleased to convey the following information:

In TAL Block hydrocarbons have been encountered in its exploratory well, Marmzai-1, which is being drilled. In the Lockhart Formation, upper 75 meters of the drilled section produced around 12 MMscfd gas and 430 bbls per day condensate during Barefoot DST @ 32/64" fixed choke size at flowing wellhead pressure of 2483 psi. The discovery is made in the uppermost reservoir section of the well and drilling is continued to penetrate and test the lower potentially prospective zones.

The full extent of discovery from the well will be known once the well reaches the planned Total Depth during next 2-1/2 months.

Cont'd...P/2...
